Page 2 Docket No: 341.030US1

In the Specification

Please enter the enclosed substitute SEQUENCE LISTING into the specification.

Please amend the paragraph beginning at line 26 of page 23 as follows:

Further provided is a vector comprising a ribosome binding site which optionally overlaps by one nucleotide with a *Sgf*I recognition site and a recognition site for a first restriction enzyme that generates blunt ends, which vector, once digested with *Sgf*I and the first restriction enzyme and ligated to a DNA fragment comprising an open reading frame encoding a peptide or polypeptide flanked by

5' CGCCATGX₁Y₁ (SEQ ID NO:2) 3' TAGCGGTACX₂Y₂ (SEQ ID NO:71)

and a blunt end generated by a second restriction enzyme that has infrequent restriction sites in cDNAs or open reading frames from at least one species and generates blunt ends, yields a recombinant vector which encodes the peptide or polypeptide, wherein X_1 is the first codon which is 3' to the start codon for the open reading frame, wherein X_2 is the complement of X_1 , wherein Y_1 is the remainder of the open reading frame, and wherein Y_2 is the complement of Y_1 . In one embodiment, $X_1 = GR_1R_2$, wherein R_1 or $R_2 = A$, T, C or G.
